Education

Shri Ram Institute Of Technology **Sep. 2019 – May 2023**
Bachelor of Technology in Computer Science — CGPA : 8.02/10 *Jabalpur, Madhya Pradesh*

Technical Skills

Languages & Frameworks: Java, Python, Spring Boot, Spring Security, Hibernate, Django, Django REST Framework (DRF), Flask, React.js, JavaScript, Kotlin
AI & Integration: OpenAI, Claude, Self-Hosted LLaMA, LangChain, WhatsApp Business API, OAuth 2.0, Keycloak, JWT, REST APIs, Microservices, TDLib
Databases & Cloud: PostgreSQL, MySQL, Oracle, MongoDB, MS-SQL, Redis, Memcached, Apache Kafka, Apache NiFi, Microsoft Azure, Nginx, Gunicorn
Technologies: Docker, Kubernetes, GitHub Actions, Azure DevOps, CI/CD, Linux, Git, Camunda, Postman, Sentry, Pytest, JUnit, System Design

Experience

Software Developer Engineer — Kiya.Ai **May 2026 – August 2026**
Fintech — Banking APIs & AI Solutions

- Built an AI-powered banking chatbot with a Flask backend, Spring Boot middleware, and a self-hosted LLaMA model for natural-language resolution of core banking API queries.
- Extended the chatbot to WhatsApp via the WhatsApp Business API, reaching 10K+ customers on their preferred messaging channel and cutting support ticket volume by 30%.
- Introduced Memcached-based response caching for the chatbot and banking APIs, reducing average query latency and easing load on downstream banking microservices during peak traffic.
- Architected secure, scalable banking microservices (fund transfers, account management, KYC verification, transaction processing) in Django REST Framework and Spring Boot, deployed on Microsoft Azure with Kubernetes and Docker.
- Designed PCI-DSS-compliant architecture with OAuth 2.0, JWT token rotation, and AES-256 encryption at rest and in transit, ensuring zero critical security incidents across all fintech APIs.
- Implemented CI/CD pipelines on Azure DevOps with Kubernetes rolling deployments and health-check probes, achieving 99.9% uptime SLA and cutting release cycles by 50%.

Software Developer Engineer — Reliance Jio Platforms Limited **Dec 2023 – May 2026**
Jio-XCode, CWMS — Low-Code Platform & Workforce Management

- Led end-to-end development of the Jio-XCode Low-Code/No-Code platform in Java Spring Boot with Keycloak-based OAuth 2.0 and Spring Security, enabling management of 10K+ contract employees and securing 50K+ monthly logins.
- Integrated Forms.io with a React.js frontend for drag-and-drop form creation, reducing form deployment time by 60%.
- Migrated legacy CWMS monoliths to Django REST Framework microservices for an enterprise workforce platform (25K+ daily check-ins), improving scalability by 40% and cutting API latency by 35% via Redis caching.
- Built multi-database integrations across MongoDB, PostgreSQL, and MS-SQL, and Python-based automation and data-processing pipelines on Linux, improving data-sync reliability by 35%.
- Designed Nginx reverse-proxy and API-gateway configurations for secure cross-service integration; implemented CI/CD with GitHub Actions and Azure DevOps, cutting deployment time by 50%.
- Containerized services with Docker, optimized PostgreSQL via ORM tuning to improve report generation by 25%, and mentored 4 junior developers in Django best practices.

Projects

Hasikit | *Kotlin, Jetpack Compose, TDLib, Telegram API, ExoPlayer, Android*

- Founded and built Hasikit, an open-source OTT-style Android streaming platform, integrating TDLib's C++ core via JNI bindings for real-time Telegram channel and file access without official bot API limitations.
- Implemented Telegram authentication, ExoPlayer-based media streaming, offline downloads, subtitles, and a modern Jetpack Compose UI, delivering smooth large-file playback without traditional video-hosting infrastructure.

EmailDoot | *Django, LangChain, SMTP, PostgreSQL, Docker*

- Built an AI-powered email automation platform in Django, integrating LangChain to generate context-aware campaign emails from prompts; enabled bulk dispatch to 5K+ recipients with 99.9% delivery success via async SMTP queues.
- Designed Django ORM analytics aggregations and real-time campaign dashboards; containerized end-to-end with Docker and deployed on Azure with GitHub Actions CI/CD.
